DISCIPLINE

NOTICE TO ALL KRAWFORD EMPLOYEES AND SUBCONTRACTORS ENERGIZED ELECTRICAL PANELS AND FIXTURES

It has come to my attention that in the past we have had problems with individuals tampering with electrical panels and fixtures.

This is not only incredibly dangerous but also very foolish.

Electricity, just like heights, will kill you if you do not respect it. For that reason, tampering with electrical panels/fixtures will be treated the same as fall protection violations.

Anyone caught tampering with, modifying or in general reworking electrical panels, fixtures, sockets or any other part of a building's electrical systems who is not qualified to do so by trade training will be subject to a 2 day minimum Krawford suspension for a first offense and dismissal from any and all Krawford sites on a second offence.

In most cases there will be no near miss with electricity, it is incredibly dangerous to work with if you are not properly trained to do so. You can't always see it, but it will always hurt you once you find out that it's there.
